平成 29 年 3 月

## 目次

1. 紀要論文（出版者版、JaLC DOI 登録を行う場合）
2. 学術雑誌論文（著者版、エンバーゴあり、JaLC DOI 登録を行わない場合）
3. 学位論文（JaLC DOI 登録を行う場合）
4. 研究データ（JaLC DOI 登録を行う場合）

## 注意

- レイアウトの都合で要素の途中で改行しているところがあります

1. 紀要論文（出版者版、JaLC DOI 登録を行う場合）

```

<jpcoar:subject xml:lang= "ja" >Climatology ; Meteorology ; Atmosphere</jpcoar:subject>
<datacite:description descriptionType= "abstract" >Here, the authors describe the construction of a forcing dataset for Land Surface Models (including both physical and biogeochemical models; LSMs) with eight meteorological variables for the 35 year period from 1979 to 2013. The dataset is intended for use in a model intercomparison (MIP) study, called GTMIP, which is a part of the Japanese-funded Arctic Climate Change research project. In order to prepare a set of site-fitted forcing data for LSMs with realistic yet continuous entries (i.e. without missing data), four observational sites across the pan-Arctic region (Fairbanks, Tiksi, Yakutsk, and Kevo) were selected to construct a blended dataset using both global reanalysis and observational data. Marked improvements were found in the diurnal cycles of surface air temperature and humidity, wind speed, and precipitation. The datasets and participation in GTMIP are open to the scientific community (https://ads.nipr.ac.jp/gtmip/gtmip.html).This data includes four data sets below.L0 data: 34-year, reanalysis-based (ERA-Interim), 30-min dataL1 data: L0 data merged with the GRENETEA site observationsDetrended data: 20-year detrended driving data for spin up based on L1 (1980-1999)FPAR/LAI data: MODIS based monthly data at GRENE-TEA site (2001-2011; monthly)</datacite:description>
